

WENGER'S FEED MILL

Owner

Wenger's Feed Mill, Inc.

Size/Capacity

50'-0" x 100'-0" x 162'-0"

Completion Time

14 months

Younglove's Services

- General construction
- Slipform concrete construction
- Equipment installation

Muncy, Pennsylvania

Our second project for Wenger's Feed Mill, Inc., was the construction of a mill to produce poultry and swine feed. The 142.75-foot-tall slipform structure contains 99 bins in an area measuring 60 feet by 100 feet. Our scope of work also included the equipment installation.

The receiving system for the mill consists of two truck receiving pits—one with an 8,850-cubic-foot-per-hour capacity for whole grain and one with a 7,250-cubic-foot-per-hour capacity for soft stock. Two 8,450-cubic-foot-per-hour rail receiving pits are also part of the system.

Adjacent to the main mill structure is a 36-foot by 20-foot by 96-foot-tall grinding slipform structure with four 10-foot-square bins and two milling lines with a capacity of up to 5,720 cubic feet per hour.
