- Construction management
- Slipform concrete construction
- Equipment installation

Newell, Iowa

This fully automated swine feed mill utilizes a 500 hp pellet mill to produce 50 tons per hour and has room for a second complete system. Five process scales are used to batch at up to 120 tons per hour. The slipform concrete mill tower has 1,570 tons of ingredient storage, 200 tons of mash storage, and 970 tons of finished feed storage in its 42 bins.

A split-type scale is also utilized for receiving by truck. Also included are a 300 hp boiler, 350 hp hammermill, storage area for five liquids, pellet screener, and bulk truck loadout. Pre-engineered metal buildings enclose the warehouse, office space, boiler room, and receiving areas.
