- Slipform concrete construction
- Equipment installation

Byers, Colorado

This new slipform concrete terminal was located to provide a rail shipping point to export markets for Colorado wheat farmers. Grain is transferred from 10,000 to 20,000 bushel per hour through the facility, which has a complete dust control system. All tanks and bins are hoppers for energy-saving gravity flow throughout.

The dual truck receiving station has a 20,000-bushel-per-hour capacity. A unique 40,000-bushel-per-hour unit train loadout system features a hydraulic loading spout and a track scale. A control room overlooking the loadout operation permits control of the total terminal facility from a single location.
