12 months

Younglove's Services

- Structural engineering
- General construction
- Slipform concrete construction
- Equipment installation

Fremont, Nebraska

This facility was constructed as a new grass roots facility for production of premium pet food. The facility consists of a process tower, offices, ancillary support spaces, a packaging room, and a warehouse. Emphasis was placed on sanitary design, superior access, and efficient material handling.

Yard areas are paved with concrete to reduce the amount of yard lighting required.

Major process equipment, including extruders, dryers, coaters, and coolers, were provided by the owner.
